

EDUCATION

The University of Texas at Austin

Bachelors of Science in Neuroscience | Elements of Computing Certificate | GPA: 3.8 / 4.0

May 2024

Relevant Coursework: Software Design (Data Structures & Algorithms) | Data Analytics (Machine Learning) | Data Visualization | Quant Tools | Ethics of AI | Computer Architecture | Operating Systems

TECHNICAL SKILLS

Key Skills: AI Automation | REST APIs | Cloud Computing | Object-Oriented Programming | System Design | Full Stack | Testing**Languages & Technologies:** Claude | Windsurf | AWS (Solutions Architect Associate Certified) | Splunk | Jenkins | New Relic | Observe | Snowflake | ServiceNow | Python | Java | JavaScript | TypeScript | Scala | Node | Swift | Go | SQL | NoSQL | Docker**Frameworks & Libraries:** OpenTelemetry | React | Flask | Express | PostgreSQL | Jest | ScalaTest | Mockito | Mongoose | Boto3

PROFESSIONAL EXPERIENCE

Capital One | Technology Development Program | Software Engineer

McLean, VA | Feb 2025 – Present

- Streamlined a high-throughput Traces Cluster using Go and OpenTelemetry to process 100M+ daily traces, providing full-stack observability for cross-functional engineering teams across Capital One and Discover
- Architected event-driven failover and fallback runbooks for an enterprise-scale OpenTelemetry pipeline, reducing recovery time while ensuring 99.9% data persistence and preventing large-scale telemetry loss during regional outage
- Launched a Melio Fraud Processing component utilizing Python that automates instant account freezes for fraudulent payments, replacing manual fraud intervention while scaling risk posture to support projected 30% Melio usage growth
- Lead engineer for the Melio Fraud Processing database, leveraging a low-latency DynamoDB datastore to filter duplicate records across cross-region replication and ensure data integrity.
- Aided the launch of Angular-based Melio widgets on Capital Ones website for small business bank accounts where it reached over 25k users and increased outbound digital money movement engagement rate to 56%

Capital One | Capital One Developer Academy | Software Engineer in Training

McLean, VA | Aug 2024 – Feb 2025

- Achieved a 6-month intensive software engineering training focused on full stack development, AWS, DevOps, and Cyber Security, where I completed 60+ full stack apps with colleagues and mentors
- Redesigned an internal fargate managed app previously running on Python into Scala that supports consumption and storage of data topics from Capital Ones main data pipeline to increase message processing performance
- Utilized Jira and an Agile software development framework to achieve collaboration and continual feedback with mentors

University of Texas Computer Science | Elements of Programming Teaching Assistant

Austin, TX | Jan 2023 – May 2024

- Moderated with instructor and 11 TAs to facilitate recitations, grade programs, and address 550+ students over Introduction to Programming topics taught in Python while fostering a collaborative learning environment over Piazza

LEADERSHIP & HACKATHONS

Generative AI Hackathon 2025

- Assembled a digital assistant leveraging the GenAI model Llama 4 Scout and Gradio to help architects at Capital One explore existing software as a service catalog to avoid redundant development work while maximizing existing solutions

Bank Tech Expedition Everest Hackathon 2025

- Generated a Python GenAI-driven personalized marketing engine, leveraging 5 years of customer segment data, offer history, and acceptance rates to dynamically adjust customer marketing offers and increase offer redemptions

Bank Tech Students & Grads Engagement Council

- Spearheaded nationwide learning and development initiatives for 200+ Capital One associates, leveraging GenAI workshops and executive Q&As to bridge technical skill gaps and foster a culture of inclusion within Bank Tech
