

CHASE PHAM

Full Stack Software Engineer

714-306-8450 | chasejpham@gmail.com | <https://chasepham.github.io/> | [linkedin.com/in/chasepham](https://www.linkedin.com/in/chasepham) | github.com/ChasePham

EDUCATION

The University of Texas at Austin

Bachelors of Science in Neuroscience | Elements of Computing Certificate | GPA: 3.8 / 4.0

May 2024

Relevant Coursework: Computer Architecture | Operating Systems | Design and Analysis of Algorithms | Data Structures | Machine Learning | Data Visualization | Quant Tools | Ethics of AI

TECHNICAL SKILLS

Key Skills: Resiliency & Reliability Engineering | Observability | Cloud Computing | REST APIs | System Design | Full Stack | DevOps | AI Automation | E2E Testing

Languages & Technologies: AWS (Solutions Architect Associate Certified) | Kubernetes | Jenkins | New Relic | Observe | Prometheus | Claude | Snowflake | Terraform | OpenTofu | ServiceNow | Firebase | Python | Go | Java | JavaScript | TypeScript | Scala | Node | Swift | SQL | NoSQL | Docker | Splunk

Frameworks & Libraries: OpenTelemetry | gRPC | React | Angular | Boto3 | Flask | Mongoose

PROFESSIONAL EXPERIENCE

Capital One | OpenTelemetry | Software Engineer | McLean, VA

Feb 2026 – Present

- Owned and scaled multi-tenant traces and metrics clusters in Golang and OpenTelemetry, processing 500M+ telemetry data hourly and delivering full-stack observability to engineering teams through New Relic and Observe platforms.
- Led the re-architecture of telemetry routing from 22 per-tenant clusters to two shared multi-tenant clusters, eliminating per-cluster upgrade and patch cycles and cutting configuration rollout time from 21+ hours to 90 minutes.
- Migrated all of our team's cluster workloads to ECS Managed Instances, offloading EC2 patching and host lifecycle management to AWS while retaining full control over instance family and hardware shape.
- Architected event-driven failover and failback runbooks for an enterprise-scale OpenTelemetry pipeline, reducing recovery time while ensuring 99.9% data persistence and preventing large-scale telemetry loss during regional outage.
- Built a Claude-based assistant answering on-call, support, and onboarding questions for my team's 16 engineers, replacing manual searches across Jira, Confluence, and PagerDuty, compounding context from all resolved incidents.

Capital One | Payments for Small Business Banking | Software Engineer | McLean, VA

Feb 2025 – Jan 2026

- Launched a Melio Fraud Processing component utilizing Python that automates instant account freezes for fraudulent payments, replacing manual fraud intervention while scaling risk posture to support projected 30% Melio usage growth.
- Lead engineer for designing the Melio Fraud Processing database, leveraging a low-latency DynamoDB datastore to filter duplicate records across cross-region replication and ensure data integrity.
- Aided the launch of Angular-based Melio widgets on Capital One's website for small business bank accounts where it reached 1+ million users and increased outbound digital money movement engagement rate to 56%.

Capital One | Capital One Developer Academy | Software Engineer in Training | McLean, VA

Aug 2024 – Feb 2025

- Redesigned an internal Fargate-managed app previously running on Python into Scala that supports consumption and storage of data topics from Capital One's main data pipeline to increase message processing performance.

University of Texas Computer Science | Undergraduate Teaching Assistant | Austin, TX

Jan 2023 – May 2024

- Moderated with instructor and 11 TAs to facilitate recitations, grade programs, and address 550+ students over Introduction to Programming topics taught in Python while fostering a collaborative learning environment over Piazza.

LEADERSHIP

Bank Tech Students & Grads Engagement Council

Mar 2026 – Present

- Spearheaded nationwide learning and development initiatives for 200+ Capital One associates and interns, leveraging GenAI workshops and executive Q&As to bridge technical skill gaps and foster a culture of inclusion within Bank Tech.
